No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

Patent No. 592651

GENERAL INFORMATION:
TITLE OF INVENTION: High Molecular Weight Surface Proteins
TITLE OF INVENTION: of No. 5928651-Typeable Haemophilus
NUMBER OF SEQUENCES: 10

CORRESPONDENCE ADDRESS:
ADDRESSEE: Shoemaker and Mattare, Ltd.
STREET: 2001 Jefferson Davis Hwy., 1203 Crystal Plaza
STREET: Bldg. 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDIUM TYPE: Floppy disk

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 1529;
                                                                                                                                                                                                                                                                                                                           Sequence 10, Application US/08728470
Patent No. 1928651
GENERAL INFORMATION:
APPLICANT Barenkamp, Stephen J
TITLE OF INVENTION: High Molecular Weight Surface Proteins
TITLE OF INVENTION: of No. 5928651-Typeable Haemophilus
NUMBER OF SEQUENCES:
ADDRESSEE: Shoemaker and Mattare, Ltd.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ADDRESSEE: Shoemaker and Mattare, Ltd.

"The complete nuclectide sequence of the Bacillus licheniformis NM105
S-layer-encoding gene.";
Gene 173.189-194 (1996).
-!- FUNCTION: The S-layer is a paracrystalline mono-layered assembly of proteins which coat the surface of bacteria.
-!- SUBCELLULAR LOCATION: Cell wall.
-!- SIMILARITY: Contains 3 S-layer homology (SLH) domains. 1 AGKSFPDVPAGHWAEGSINYLVDKGAITGKPDGTYGPTESIDRASAAVIFTKILNLPVDE 30 AGKSFPDVPAGHWAEDSINYLVDKGAIVGKPDGTYGPTESIDRASAAVIFTKILNLFVDE NAQPSFXDAKNIWSSKYIAAVBKAGVVKGDGKENFYPEGKIDRASFASMLVSAYNLKDKV 90 NAQPSFKDAKNLWSSKYIAAVEKAGVVKGDGKDNFYPEGKIDRASFASMLVGAYNLKEKV NGELVTTPEDLLDHWGEEKANILINLGISVGTGGKWEPNKSVSRAEAAQFIALTDKKYGK 181 KDNAQAYVTDVKVSEPTKLTLTGTGLDKLSADDVTLEGDKAVAIEASTDGTSAVVTLGGK 210 PENSDAKVINVAATEPIQLILIGIGIAKTIAEDVILEGNKAIALEASKOGKSAVVILSGK LANHDVKFVANNLDGSPANI FEGGEATSTTGKLAVGI KQGDYKVEVQVTKRGGLTVSNTG Gaps 23; DB 1; Length 874; Indels Bacteria, Firmicutes; Bacillales; Bacillaceae; Bacillus, NCBI_TaxID=1402; EFADCA4FF27D32AF CRC64; 67.4%; Score 2833.5; DB 1; 67.3%; Pred. The complete nucleotide sequence of the Bacillus licheniformis NM105

S-layer encoding gene.";

Gene 173:189-194 (1996).

-!- FUNCTION: The S-layer is a paracrystalline mono-layered assembly of proteins which coat the surface of bacteria.

-!- SUBCELJULAR LOCATION: Cell wall.

-!- SIMILARITY: Contains 3 S-layer homology (SLH) domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           23; Gaps
